Consultee responses

Consultee	Date of response	Response
Dwr Cymru	29/11/2007	There are issues regarding capacity at the treatment works. No improvements are planned in the current investment programme up to 2010. It may be included in the following programme upto 2015. There has been a flooding incident near the site. A study is needed to ascertain causes and whether development here would exaccerbate it. This would be charged to the developer.
PCC Highways		Dependent on upgrading of Glasfryn Road.
Countryside Council for Wales		No response received
Environment Agency Wales	08/01/2008	No flooding/sewer problems. FCA needed.

Dyfed Archaeology	30/05/2008	Within close proximity to the important Medieval ecclesiastical centre of St Davids and may have an impact upon a registered historic landscape. Sites with known evidence suggesting surviving significant archaeological remains. These areas require further assessment such as a desk – top exercise and site visit to clarify if any areas should be excluded from or retained within the development.
Pembrokeshire County Council	26/01/2009	The development of this site would appear not to affect ordinary watercourses.
Reasons site is suitable for development		etween existing development and other site regarded as velopment. Well contained by existing features.
Reasons site is not suitable for development		
Does the site pass stage two tests? Yes Proposed use Mixed		

Stage three: Sustainability Appraisal

Sustainability Objective	Summary	Commentary
1	+	This is an isolated field bounded to the south and west by roads, to the north by a dwelling and to the east by a small housing estate. The land is not of a high agricultural grade.
2	++	The site is within walking distance of the good range of facilities and services within St Davids. The City is served by regular bus services to Haverfordwest and Fishguard with a full range of services and facilities.
3	+	Carefully planned and sited new development could greatly enhance the boundary condition here and propertly assimilate these edges of the city into the adjoining open landscape.
4	0	Though the development will increase the population and therefore the pool of residents that could be taking part in physical recreation, the Sustainability Objective seeks a change in behaviour such that a greater proportion of residents and non-residents are takingpart in physical recreation in the Park, and therefore enjoying the health benefits.
5	0	The development will not achieve this aim.
6	+	The site is not within an area liable to flooding. Development should incorporate energy efficiency and sustainable design principles.
7	+	Housing will be build according to the sustainable design policies of the Plan requiring the highest standards for energy efficiency.
8	++	The site provides an opportunity to accommodate small scale employment needs around the Peninsula with associated housing. Development will also help to sustain services locally.
9	+	The site can be used to accommodate identified need for affordable housing.

10	++	The site provides an opportunity to accommodate small scale employment needs arising from within the community and so will assist in maintaining the cultural distinctiveness.
11	0	Development of an individual site is irrelevant to this Sustainability Objective, as its goal is to avoid negative effects of minerals acquisition whereever and whatever the use of those mineral products.
12	0	Development here is likely to marginally increase waste, though this inevitable and the only way to avoid this would be to have no development and no increase in population (in or outside the Park, as displacement of the waste generation would not eliminate its harmful effects).
13	+	The Authority does not have SPG in place on developer contributions which would help inform this element of the appraisal. No needs other than those identified by statutory consultees are currently apparent apart from affordable housing.
14	+	There may be opportunity for habitat creation within the site through the planning process.
15		Policy 17, Sustainable Design aims to make efficient use of water resources. Issues relating to water quality are addressed at Stage 2 and through the Habitats Regulation Screening and Assessment at Stage 5.

Overall Sustainability Appraisal

The site is within walking distance of a good range of facilities in St Davids and has regular bus services to Haverfordwest and Fishguard. Plan policy to secure as much affordable housing as can be achieved and is needed as opposed to general needs housing will help ensure development aims to meet the needs of local communities. The housing built will meet the highest standards for energy efficiency due to the sustainable design policies of the Plan.

Is the site acceptable for development after Sustainability Appraisal Yes

Stage four: compatibility with the Preferred Strategy			
Is site within or adjacent to named centre?	Yes		
Is the proposed use listed as appropriate for the centre?	Yes		
Is the provision consistent with the scale of development proposed for	Yes the proposal will help meet the household projection needs of Tier 3 Centres. There is also an identified need for employment provision.		
Is the provision meeting an identified need in the centre?	See above.		
If greenfield, are there sufficient brownfield sites to avoid choosing this one?	It is a greenfield site. There are insufficient brownfield sites.		
Overall stage 4 assessment			

Overall stage 4 assessment

The site is within or adjacent to named centre in the Strategy. A use is proposed which is considered appropriate as per the Strategy.

The proposed use accords with the type of use considered appropriate for the various centres. St Davids is in need of employment provision to accommodate predominantly unauthorised

development in the area. The size of the proposal is 0.74 hectares for the live/work site, which is considered small relative to the size of the Centre.

Is the site compatible with the preferred strategy? Yes

Stage Five: Habitat Regulations Assessment

For more information see the Habitats Regulations Screening and Appropriate Assessment reports

The site is within 650m of North West Pembrokeshire Commons SAC, which is vulnerable to air pollution and changes in water quality and quantity. As a result of this allocation there will most likely be an increase in air pollution due to increased use of vehicles. However, given the size of the site it is likely that any increase would be minimal and therefore no significant effects are expected as a result of this allocation.

EAW (08/01/08) in response to consultation on this site identified that there are no flooding or sewer problems in relation to this site. However, Dwr Cymru's (29/11/07) response identifies that "there are are issues regarding capacity at the treatment works. No improvements are planned in the current investment programme up to 2010. It may be included in the following programme up to 2015. There has been a flooding incident near the site. A study is needed to ascertain causes and whether development here would exacerbate it".

Given the size and location of the site, it is extremely unlikely that this allocation alone will have significant effects on any Natura 2000 sites.

The Appropriate Assessment concluded no adverse effect on integrity.
